

PANJAB UNIVERSITY, CHANDIGARH

No. 387-460/R/DS

Date: 03-05-2018

Due to change in climate, problems related with mosquitoes in the University Campus has increased. Hence, in order to check mosquitoes breeding and to prevent the out-break of diseases, like Dengue, Malaria, etc., urgent necessary steps are required to be taken.

In this regard, may I request you to make a detailed inspection programme of all hostels, residential areas and community facilities, such as Student Centre, Auditoriums, Playgrounds, etc., for ensuring that such places are free of wild growth of grass and foliage as also no stagnant water bodies are allowed to exist in their vicinity.

A programme of urgent 'fogging' of all such areas also be made and necessary intimation be disseminated to all concerned, with a copy to this office.

A physical reporting of cases of 'Dengue' patients and their recovery status be put up to the Registrar's office, giving out the details of the student/employee, department, residential area, from where the case has been reported for analysis and arresting further outbreak of such diseases in those areas.
